

PHOTO TAKING GUIDE

FILE SPECIFICATIONS:

- ✓ Accepted file types: jpg, png.
- ✓ Maximum file size: 3 MB
- ✓ Maximum number of files: 6 for the sink, 2 for the house

To assess the location of your water purification and filtration system, please provide the requested photos based on the type of system selected.

UNDER THE SINK SYSTEMS

Photo of the plumbing under the sink:

Take a photo of the area under your sink where the plumbing is visible.

Please remove all objects under your sink so that the space and pipes are completely clear and visible in the photo.

Photo of the top of the sink:

Also, take a photo of the sink from above.

It is important that the photo clearly shows the countertop and the area around the faucet so that we can check if an additional faucet can be installed.

A minimum clearance of 3 inches in height and width is required under the sink.

This spacing allows easy filter replacement and proper installation of connection pipes.

WHOLE HOUSE SYSTEMS

Photo of the intended location:

Take a photo of the area where you plan to install the system (e.g., near your water heater).

Please ensure that the drain, the electrical outlet, and the main water valve are clearly visible in your photo.

A minimum space of 12 inches in height and 6 inches in width is required.

This minimum spacing is to facilitate handling and installation of the connection pipes.

TECHNICIAN EVALUATION

In some cases, our technicians may be able to reduce the minimum clearances mentioned above. When on-site, the technician will assess the available space and determine if an installation with reduced clearances is possible.
